A BUILD FOR THE FISSION TEAM · OCTOBER 2026

Fission Pulse

An independent tracker that turns Fission's own public data into a live, public picture of how much exit liquidity is ready, what an early exit costs, and how long each fund would otherwise make holders wait.

EXIT LIQUIDITY READY	POSITIONS FISSION HOLDS	LIVE FUNDS	CHAINS
$3.81M	$1.84M	11	7

Snapshot taken Oct 29, 2026 at 10:55 UTC.

Why I built it

Fission's story is "200 days to 90 seconds." The numbers that prove it already exist, but only inside the redeem app. Pulse puts them on one page anyone can check, which is the kind of proof institutions, press and partners look for.

What it is

A small Python and Flask app with a dashboard styled to sit next to Fission's own product. It runs anywhere, saves a snapshot every hour, and builds history over time.

WHAT THE DATA SHOWS

Three things I noticed on day one

$81
LEFT IN POOL

Midas Fasanara Global has run out of exit liquidity

Liquidity used up

Fission holds about $994K of mGLOBAL and the fund's next window is 27 days away. Until that window or a top up, holders can't exit this fund through Fission. A public tracker is how you'd spot this before a client hits it.

4.79%
APOLLO EXIT FEE

Apollo credit is the premium product

Highest fee

Exiting ACRED or ACRDX costs 4.79% today, while the treasury and CLO funds cost between 0.01% and 0.34%. Fission already holds $845K of Apollo against $390K of ready liquidity. This is where demand and margin sit, and it deserves its own story.

9
FUNDS NOT LIVE YET

The pipeline is bigger than the press coverage

Pipeline

Coverage mentions Apollo, Janus Henderson and New York Life. The app already names 20 funds, including KKR, Coinbase, Hamilton Lane and VanEck. Each one going live is a launch moment worth a joint announcement with the issuer.

How it works

Public fund list loaded by redeem.fission.xyz → Hourly snapshot saved →
Pools counted once, fees and windows read → Dashboard and activity log

- **Only public data.** Pulse reads the same fund list the redeem page loads in any browser, once an hour. Funds Fission hasn't listed publicly are left out of the live table.
- **Activity without wallets.** When Fission's holdings in a fund go up between snapshots, holders exited. When they go down, Fission redeemed with the fund. No client wallets are tracked or labeled.
- **Shared pools handled.** Some funds share one USDC pool, so totals count each pool once instead of double counting.
- **Easy to hand over.** One command to run: `python app.py`. It can be hosted on Fission's side or moved to a Dune dashboard.

WHAT I'D DO AS HEAD OF GROWTH

A 90 day plan built on proof, not hype

Fission sells to hedge funds, treasury managers and stablecoin issuers. They don't respond to giveaways. They respond to clear numbers, credible partners and consistent presence. So the plan is about making Fission visibly trusted.

DAYS 1 TO 30

Make the proof public

- Host Pulse as Fission's official liquidity page, or rebuild it on Dune
- Weekly liquidity report on X: liquidity ready, exits processed, funds added
- A short motion graphics series explaining "200 days to 90 seconds" for institutions

DAYS 31 TO 60

Turn partners into distribution

- Joint launch posts with Securitize, Centrifuge, Midas, Superstate and KAIO for every new fund
- Case studies with real numbers: time saved and cost of exit compared with waiting
- Get Fission's data into RWA research desks and trackers so analysts cite it

DAYS 61 TO 90

Feed the institutional pipeline

- Research notes written for treasury teams and stablecoin issuers, handed to the CRO for outreach
- A launch playbook ready for the KKR, Coinbase and Hamilton Lane funds
- Monthly metrics review on reach, inbound leads and liquidity used

About me

I'm Emmanuel, a Web3 growth operator and community builder. I've led ambassador programs and go to market work for Warden Protocol, Fundi Labs and Apeflix. I also build my own tools in Python, Flask and React, and I produce motion graphics. Pulse is how I like to start: understand the product, then ship something useful.
